SwiftWing SIRIUS

...why SIRIUS ?

SwiftWing SIRIUS may appear to be just another capture box for recording packets at high-speed wired networks. At first view it becomes obvious that is has no analysis nor any detailed statistics....

So why would a customer consider looking at an "incomplete" appliance?

Analysis, Monitoring or Troubleshooting is dependent on precise data - to deliver accurate results it requires 101% capture performance - this is our exclusive mission.

What's our positioning here ?

On the one hand, existing and established applications or appliances can provide, with all their designed features & functions, comprehensive and competent results in problem solving, detailed statistics and complete reporting.

But on the other hand, these systems can only capture the required details at moderate data rates (especially proprietary networking analysis solutions). These solutions once seemed to be tailor-made for your organization but nowadays may be showing their weaknesses and flaws.

Perhaps, your organization and its technological requirements have changed over the years?

Or, even worse, your network is getting too complex or it's simply too fast to be properly maintained with the current tools?

If this is the case, then SHARING the responsibility by competence is the answer....

It is our objective to cover today's demand for high-performance Deep Packet Capture & Storage for any kind of Monitoring or Analysis purposes in a enterprise network:

SwiftWing SIRIUS is a capture & storage appliance series, capable of **sustaining up to 40 Gbps capture to disk**, regardless of packet sizes.

SwiftWing SIRIUS ensures that no packet is lost when capturing traffic even during the most demanding and intensive network conditions.

SwiftWing SIRIUS is **managed by an intuitive user interface** (GUI), allowing complete control with instant results.

SwiftWing SIRIUS offers full capture of data direct to its **storage system** of (up to) a **massive 3.600 TB.**

Any existing Monitoring Appliance or Management System can access SwiftWing SIRIUS.

Transparency & Versatility in interaction with any vendors appliance; the **RESTful API** allows seamless integration of SwiftWing SIRIUS into existing structures.

The SwiftWing SIRIUS series provides a complete range of solutions, scalable to a customers needs, starting with **four portable** versions (perfect companions for field engineering) and a range of **19" units for stationary** usage.
